PREFACE

This report was created for the F-16 Aircrew Training Development Project contract number F02604-79-C8875 for Tactical Air Command in support of CDRL no. B043. The project entailed the design and development of an instructional system for the F-16 RTU and instructor pilots. During the course of the project a series of development reports was issued describing processes and products. A list of those reports is contained on the next page. The user is referred to Report No. 34, A Users Guide to the F-16 Training Development Reports, for an overview and explanation of the series, and Report No. 35, F-16 Final Report, for an overview of the Instructional System Development Project.

EXECUTIVE SUMMARY

The media selection process utilized in this program is documented in three separate reports. Report No. 20, "F-15 Media Selection and Utilization Plan Report", describes the initial 31 step procedure designed to select instructional media for various categories of objectives. Report No. 31, "F-16 Training Media Mix", describes the 15 step procedure actually employed on the project. Report No. 26, "F-16 Pilot Media Selection", provides the raw data used in the selection process. Taken together, they provide a detailed description of the rationales employed, procedures followed, data generated, recommendations made, and media mix utilized.

This report contains the raw data that was generated during the media selection process and which supports the media decisions ~~documented in Report No. 31.~~ The eight data sets are divided into three primary categories. The first set lists each objective in the program, accompanied by the basic or primitive media characteristics required to support it. The second set lists each objective followed by a prioritized list of all the media devices that could be used to teach it. The third set consists of six media selection patterns, or mixes. Each section lists all objectives and a prioritized list of the media devices, from that particular media mix, that could be used to teach it.

F-16 PILOT MEDIA SELECTION

1.0 INTRODUCTION

This report is the data base document that supports the final media selection decisions outlined in Report No. 31, "F-16 Training Media Mix". As such, its readership will be limited to those who are charged with maintaining the F-1600B and F-1600TX courses, and those who may want to review this data before designing their own media selection methodology. It is designed to provide a record of unprocessed information, and consequently does not duplicate the rationales and explanations provided in Development Report No. 31.

Section 2.0 provides the basic or primitive media requirements of each objective in the program. Section 2.1 covers the academic or cognitive objectives, while Section 2.2 contains the hands-on objectives. In each case, the objectives are presented in a similar manner. First, the numerical designator is provided, so that the objective may be mapped directly onto the task list when desired. Second, an abbreviated version of the text of the objective is provided. Third, the media capabilities required to teach the objective are listed out. Finally, in the case of academic objectives, the classification (type of learning) required is listed. All of these terms and categories are explained in the other two media reports, Nos. 20 and 31.

Section 3.0 presents an unconstrained media selection based on the complete media device pool. Each objective is listed, as in Section 2.0, with its numerical designator, but without a summary of the text. With each objective is a complete list of all the instructional media that could conceivably accommodate that objective. These media are listed in order of instructional effectiveness, with the very best medium listed first. Beside each medium is a numerical indicator of goodness, which provides additional ranking information. Media which are tied for first place are marked with a triple asterisk.

Section 4.0 presents the raw data for six separate media mixes, or patterns. In each case a subset of media is drawn from the complete media pool and each objective is listed, followed by a prioritized list of those media which can accommodate it. In many instances a particular media mix is too lean to accommodate all objectives. In that case, the objective number is listed, but no media are assigned to it.

1.1 Format

Each of the following sections is organized around a sequential list of tasks or objectives, called a label. In Sections 2.1 and 2.2 this label is clarified by a brief task statement, such as "1.8.7.2 Perform approach with flight control malfunction/degraded holding characteristics". Numbers without an inserted slash (/) represent hands-on performance tasks, while items with a slash represent academic or classroom objectives, such as "1.8.7.2/1 State the procedure for recovery with flight controls malfunction/degraded holding characteristics". In Sections 3.0 - 4.6 only the label number is given, so it will be necessary to refer to Section 2.1 or 2.2 for a verbal description of each task or objective. The complete text for each task or objective may be found by referencing Report #6, F-16 Task Analysis, Criterion-Referenced Objective, and Objective Hierarchy Report. It will be noted, however, that the numbering system utilized in Report #6 differs from this system in one regard. Instead of using slashes to discriminate between hands-on tasks and academic objectives, Report #6 simply labels each as "(Hands-on)" or "(Academic)".

This document has not been designed to stand alone, as a full explanation of its contents would require that Report #No. 20, F-16 Media Selection and Utilization Plan Report and Report #No. 31, F-16 Training Media Mix, be reprinted and included. Instead, the reader is asked to read Reports #No. 20 and 31 very carefully before attempting to interpret this data.

1.2 Section 2.0, Primitive Media Requirements Data

The purpose of this section is to document the raw pilot judgement data that was fed into the computerized media selection process in order to produce the 7 alternative media selection patterns which are reported in sections 3.0 and 4.0. In Section 2.1, each academic objective, or cognitive task, is described in terms of the type of learning required, the visual display the student should see, the type of response he should make, the evaluation format required to evaluate his response, and the type of corrective feedback he needs, in terms of both content and frequency. All of these terms are explained in Report No. 20. In Section 2.2, each hands-on task is described in those same terms, except that the type of learning is replaced by a list of the training devices (including the actual F-16 aircraft) which may be used to train that task, and a list of those aircraft systems that are involved in performing the task. Again, these terms and categories are explained in Report No. 20.

1.3 Section 2.0, Unconstrained Media Selection Based on the Complete Media Pool

The purpose of Report No. 31 was to document the selection of a media mix, that is, a list of 6 or 8 instructional media that would present all of the objectives in the program with a

reasonable level of effectiveness. The initial media pool consisted of 27 separate presentation formats--far too many for actual use. The purpose of Section 4.0 of this document was to select 6 different subsets of media and determine how well each of those six media mixes could cover all of the objectives in the program. But 3.0 is not a media mix in the practical sense, in that it includes all 27 media in the pool. The purpose of running this program was to find the ideal medium for each objective, regardless of media constraints. The first page of Section 3.0 is a summary of the selection process, as are the first pages of 4.1 through 4.6. But the summary page data for section 3.0 is less complete than that of other sections, so the general format will be described below under the discussion of section 4.0.

1.4 Section 4.0, The Six Media Patterns

Each of Sections 4.1 through 4.6 represents data collected on a different mix of media. The summary data from each section is contained on the first page of the section. The format is as follows: First, "media mix selected". This lists the media included in this particular mix. Second, "secondary media 'hit' variance". This number is the same for all media mixes, and has no meaning for the reader. Third, "records". This is the total number of objectives processed. Fourth, "primary hits". This is the total number of objectives from the list for which one of the media in this particular list is the best medium for that objective. Fifth, "secondary hits". This lists the total number of objectives from the list for which one of the media in this particular list is the second best medium for that objective. Sixth, "minor hits". This lists the total number of objectives from the list which were not satisfied by the best or second best medium for their presentation, but were at least satisfied by one of the media on the list. Seventh, "unsatisfied". This lists the total number of objectives that could simply not be taught using one of the media in that particular media mix.

Following the summary page for each section is the raw data itself, which is again organized by sequential task or objective number. Following each number is a list of all those media which can be used to teach that objective. If no media follow a number, it means that the instructional requirements of that objective could not be satisfied by any of the media in that particular list. Those objectives which are accomplished by lists of media have those media listed in order of goodness, and each medium is followed by a numerical score. The higher the score the better the medium is for presenting the particular objective.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and resources. This may involve researching existing solutions, consulting with experts, or collecting data.

3. Once the information is gathered, the next step is to analyze it and identify the key factors that influence the outcome. This often involves breaking down the problem into smaller, more manageable parts.

4. After analysis, a plan or strategy should be developed. This plan should outline the steps that need to be taken to solve the problem, taking into account the resources available and the potential challenges.

5. The final step is to implement the plan and monitor the progress. This involves putting the plan into action and regularly checking in to see how things are going. If necessary, adjustments should be made along the way.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. The second step is to gather relevant information and data. This can involve research, consultation with experts, or collecting data from various sources.

3. The third step is to analyze the information and data collected. This involves identifying patterns, trends, and relationships that can help in understanding the problem.

4. The fourth step is to develop a solution or answer. This involves applying the knowledge and skills gained from the previous steps to create a plan or strategy that addresses the problem.

5. The fifth step is to implement the solution. This involves putting the plan into action and monitoring the progress to ensure that the solution is effective.

6. The sixth step is to evaluate the results. This involves assessing the outcomes of the solution and determining whether they meet the requirements of the task.

7. The seventh step is to communicate the results. This involves sharing the findings and conclusions with the relevant stakeholders and providing recommendations for future action.

8. The eighth step is to reflect on the process. This involves reviewing the steps taken and identifying areas for improvement or further research.

9. The ninth step is to document the process. This involves creating a record of the steps taken and the results achieved, which can be used for future reference.

10. The tenth step is to conclude the process. This involves summarizing the key findings and conclusions and providing a final recommendation.
